

Job Title

Quality / Production Engineer (M/F)

Job Description

The missions of the Quality / Production Engineer are organized around three main axes:

- Increasing the control of subcontractors
- Contribute to the release of products in accordance with the current procedures.
- Participate in the development of the company's product quality system.

The success of these missions depends on the realization of the following activities:

- Follow-up of products
- Control of relations with the various partners
- Monitoring and control of quality indicators

Implementation of the quality approach:

- Realization of the regulatory watch

The Quality / Production Engineer may oversee the following activities:

- Accompanying external contacts during factory visits
- Identify Quality issues in coordination with the company's employees and be a driving force to implement the necessary action plans (awareness actions, training, etc...).

Type

Permanent contract

Salary Range

€30.000 to €40.000

Bonus

€3.000 to €4.000

Desired Start Date

ASAP

Job Location

Rouen

Business Trips Frequency

Regular

Required Profile & Desired Level of Education

The Quality / Production Engineer must have the following professional qualities:

- Knowledge of quality tools: 8D, 5 Pourquoi, Ishikawa, Arbres des Causes, Capabilité, R&R studies (non-exhaustive list)
- Technical base on industrial processes such as plastic injection, mechanical machining and/or cabling.
- Notion of Qualification - IQ/OQ/PQ Process Validation
- Ability to write quality documents, minutes of meetings, etc...
- Mastery of the French language (written and oral) and the English language (written and oral)

Personal qualities:

- Rigor and precision to ensure strict compliance with the company's internal standards and the current regulations.
- Relational ease and ability to work in a team.

3 years of higher education with a focus on QHSE or measurement/plastics/mechanics with a specialization in quality (3 years of experience) to 5 years of junior studies (Engineering Diploma or master's degree in Quality).

ABOUT ROBOCATH

Founded in 2009 by Dr. Philippe Bencteux, Robocath designs, develops, and markets robotic assistance solutions dedicated to the treatment of cardiovascular diseases. A player in the robotic transformation of the medical sector, these developments aim to increase the gesture performed thanks to precise technologies that are complementary to current interventional methods.

R-One™ is the first robotic solution developed by Robocath. R-One integrates a unique and proprietary technology to secure and optimize coronary angioplasty with robotic assistance. This medical procedure consists of revascularizing the heart muscle through the implantation of one or more implants (stents) in the arteries that irrigate it. An operation of this type is performed every 30 seconds worldwide. R-One is designed to intervene with precision and perform very specific procedures, all in an improved work environment. Thanks to its open architecture, R-One is compatible with most coronary angioplasty devices and catheterization rooms.

In a prospective, controlled, and randomized pre-clinical study, the efficacy and safety of R-One was demonstrated with a 100% technical success rate and no major adverse cardiovascular events (MACE). The device was CE marked in February 2019 and its clinical application started in September 2019. The solution is now present in Europe and Africa.

Ultimately, Robocath ambitions to become the world leader in vascular robotics and to develop remote vascular emergency management (VEM) to ensure the best care path for all. Based in Rouen, France, Robocath has more than 50 employees.
