

Job Title

Purchaser

Job Description

The Purchaser selects suppliers and subcontractors, negotiates products and services in the best purchasing conditions (quality, price, deadlines, etc.), according to specifications defined by R&D, production, sales (distribution) or any other department.

Its missions are oriented around 4 axes:

- ✓ Selection of suppliers
- ✓ Commercial negotiation
- ✓ Contract monitoring
- ✓ Management of the Purchasing activity

In addition, he or she will be able to carry out certain specific projects in the field of his or her activities and may functionally supervise a purchasing assistant.

Type

Full-time permanent contract

Duration (except permanent)

N/A

Salary Range

€45.000 to €55.000

Bonus

10% on targets

Desired Start Date

As soon as possible

Job Location

Rouen

Business Trips Frequency

Rare

Required Profile & Desired Level of Education

BAC + 5 (business school, sales or engineering degree) and 5 years of minimum experience in a similar function.

- ✓ Mastery of negotiation techniques
- ✓ Mastery of supplier consultation methods
- ✓ Knowledge of the typology of suppliers in the fields of the company (electronics, mechanics, plastics processing)
- ✓ Purchase of projects and intellectual services
- ✓ Knowledge of commercial law
- ✓ Risk assessment
- ✓ Mastery of customs regulations
- ✓ Knowledge of medical device regulations
- ✓ Mastery of the Office Pack
- ✓ English CEFR level C2 recommended (C1 minimum)

ABOUT ROBOCATH

Founded in 2009 by Dr. Philippe Bencteux, Robocath designs, develops, and markets robotic assistance solutions dedicated to the treatment of cardiovascular diseases. A player in the robotic transformation of the medical sector, these developments aim to increase the gesture performed thanks to precise technologies that are complementary to current interventional methods.

R-One™ is the first robotic solution developed by Robocath. R-One integrates a bionic, unique and proprietary technology to secure and optimize coronary angioplasty with robotic assistance. This medical procedure consists of revascularizing the heart muscle through the implantation of one or more implants (stents) in the arteries that irrigate it. An operation of this type is performed every 30 seconds worldwide. R-One is designed to intervene with precision and perform very specific procedures, all in an improved work environment. Thanks to its open architecture, R-One is compatible with most coronary angioplasty devices and catheterization rooms.

In a prospective, controlled, and randomized pre-clinical study, the efficacy and safety of R-One was demonstrated with a 100% technical success rate and no major adverse cardiovascular events (MACE). The device was CE marked in February 2019 and its clinical application started in September 2019. The solution is now present in Europe and Africa.

Ultimately, Robocath ambitions to become the world leader in vascular robotics and to develop remote vascular emergency management (VEM) to ensure the best care path for all. Based in Rouen, France, Robocath has more than 70 employees.
